

## PRESS RELEASE

# drei01 presents insurance software for healthcare sector

## **drei01 medEdition - a solution for TPA's at the healthcare sector.**

**The distribution and administration of special instances in the healthcare sector are very complex. Claims processing in particular traditionally costs a lot of time and money. Drei01 took on the problem and presented a software solution, which simplifies the complex tasks and accelerated the claims settlement.**

drei01 expands its productline with the medEdition. The web-based software offers insurers and TPA's an easy-to-use software suite, which is specifically tailored for insurance products of the healthcare sector.

The medEdition expands the core product, the drei01 Digital Insurance Engine (DIE), and accelerates especially the claims settlement.

Functions like the digital damage file, 4-eye-principle for claims settlement, sanction check, as well as automatic reserve management are perfectly integrated into other program areas. Tasks can be automatized and processes controlled by definable sets.

The integrated reporting module allows combined ratio evaluations in a configurable level of detail.

Doctors, clinics, and customers can access different services in online-portals.

The medEdition is available now.
